

The FAA Safety Team presents:

Kingston Bi-Monthly Safety Event

Flying in mountainous areas is challenging, not only because operational altitudes and winds are higher, but also because weather reporting and off airport landing opportunities are fewer than in other flight environments. While there are fewer accidents in mountainous areas than in the flatlands, mountain flying accidents are more likely to result in fatalities.

Obviously experience in the mountain environment and knowledge of best mountain flying practices improves flight safety. Environment specific training and recent experience are essential to success.

While there aren't a lot of Colorado type mountain ranges in our region, we are going to apply these lessons to flying in the Adirondacks, Catskill and Appalachians. Bring your experiences, observations and lessons learned to this month's interactive discussion.

Directions: Rt 209 to Enterprise Dr. North 1/10 mile left to Town Hall complex. Court House is building is on right.

A message from the National FAASafety Team Manager

Invite a fellow pilot to the next WINGS Safety Seminar in your area.

Sign up for the FAA's safety services at www.FAASafety.gov!
